8. CONCLUSION

8.1 SELF ANALYSIS AND PROJECT VIABILITIES

The constant efforts into development of this project, has helped us to present you 'Tecso Internship Module'. This application helped to solve the problem of file system faced by the organization.

8.2 PROBLEMS ENCOUNTERED AND THEIR SOLUTIONS

- First problem I faced was that of understanding and learning a new technology (Activity, Intent class etc...) I started learning this technology from scratch. I made some demo projects before moving towards the live project.

- Initially we did face certain hiccups because of the lack of knowledge about the working patterns in actual software Industry, but with passage of time we coped up with the pressures of working in a tight schedule trying to beat the clock to complete given tasks in time slots allotted.

- The problems encountered during the training were purely due to lack of knowledge in various technical aspects.

- The other problems faced where the coding standards as followed by the company, coding conventions, layouts etc.

8.3 SUMMARY OF THE PROJECT

We have developed this project with the professional standards as specified by the organization in which we did our training. "Tecso Internship Module" mobile application can be used in the organization itself. Project manager is the main user and students can view their profile and can request for leave.

This application can only be accessible on android device and internet is needed as all the records are stored on server.
